new! PremierAir™

Hygiene and Diagnostic Instruments

- Comfortable, balanced, ergonomic handle with non-slip grip means less pressure to maintain control and less hand fatigue
- Exceptionally light, rugged polymer handles and tested extensively to ensure a long working life
- Made to high standards by master craftspersons

Hygiene Instruments

- Precision tips made with 440A stainless steel and SmartSharp® Technology keep edges sharp and well defined

Probex and Explorers

- Probes are easy to read and resistant to wear
- Explorers have excellent tactile sensitivity and sharp points for easy detection of tooth texture and surface irregularities

Premier® SmartSharp® Technology

Premier's innovation in sharpening technology allows you to start sharp and work smart:

- Easily maintain sharpness – proprietary process ensures a well defined edge you can easily re-sharpen as needed
- Apply less pressure and use fewer strokes – achieve a glass-like tooth surface
- SmartSharp® available on Premier Scalers and Curettes – at no additional cost

Premier® Instrument Edge

Leading Competitor Edge

A sharp edge ensures a smooth, precise cut with less hand fatigue.

An irregular edge is less efficient and can lead to more hand fatigue.

D.I.S.C.™

Now, you can quickly sharpen scalers and cures correctly – without damaging the cutting surface.

9048200 - Autoclavable D.I.S.C. Instrument Sharpener (Metal)

9048093 - D.I.S.C. Replacement Stone

Easy-to-follow instructions for all instruments included with D.I.S.C.

Extend Instrument Life...Enhance Your Efficiency

1 Turn the protractor dial to the appropriate dial setting (Example: "G" for any Gracey 1-10).

2 Hold the instrument with the handle parallel to the Instrument Reference Lines. Position the working end towards the center.

3 Keeping the wrist stiff, use a pull stroke with moderate pressure (repeat 5 or 6 times).

4 On a curette, roll the instrument as you finish your pull stroke to maintain the rounded toe.

D.I.S.C. Sharpening stones, autoclavable and available separately, never need oil or water as is required with Arkansas stones.

Gracey

Gracey 1/2 • BEUL-05601 • BE-1005001 • LT-1004810 • PremierAir-1004660
Short shank for incisors and cuspids

Gracey 3/4 • BEUL-05603 • LT-1004811 • PremierAir-1004661
Short contra-angle shank for incisors and cuspids

Gracey 5/6 • BEUL-05605 • BE-1005010 • LT-1004812 • PremierAir-1004662
Medium shank for cuspids and molars

Gracey 7/8 • BEUL-05607 • BE-1005015 • LT-1004813 • PremierAir-1004663
Medium contra-angle shank for bicuspid and molars, buccal and lingual surfaces

Gracey 9/10 • BEUL-05609 • LT-1004814
Long contra-angled for molars with more acute blade angle

Gracey 11/12 • BEUL-05611 • BE-1005020 • LT-1004815 • PremierAir-1004665
Triple angulation for easy access to buccal/mesial and lingual/mesial surfaces of premolars and molars

Gracey 13/14 • BEUL-05613 • BE-1005025 • LT-1004816 • PremierAir-1004666
Triple angulation for easy access to distal/posterior surfaces of premolars and molars

Gracey 11/14 • LT-1004817
For easy access to a facial or lingual sextant with a single instrument.

Gracey 15/16 • BEUL-05653 • BE-1005026 • LT-1004819
Angled shank, designed to reach mesial surfaces of posterior teeth

Gracey 17/18 • BEUL-05655 • LT-1004820
Highly angled shank for reaching distal surfaces of posterior teeth

Gracey-Rigid

After probing, InSite™ scalers provide added visual confirmation that you have reached the base of the pocket.

Gracey Variations

Pocket Scalers (PS) and Mini Pocket Scalers (MPS) have a slender and longer terminal shank to provide access into deeper pockets. MPS has the same slender tip design as PS, but with half the blade length. InSite PS and MPS have a depth gauge at 5mm through 10mm offering an excellent visual guide.

Big Easy Ultralite Pocket Scalers (PS) and Mini Pocket Scalers (MPS) do NOT feature the depth gauge found in InSite Scalers

Rigid Gracey designs have a thicker shank than the original Graceys, but are overall slightly shorter for increased strength when removing heavy calculus.

Cleaning/ Sterilization

Inspect, clean, and sterilize prior to each use.

Cleaning: Rinse inserts thoroughly or fully immerse in a mild ultrasonic cleaning solution. Carefully remove gross debris.

Ultrasonic Cleaning: 7-10 minutes - Inserts placed in an ultrasonic cleaning unit. 16-20 minutes- Inserts placed in a cassette.

Note: Care should be taken in placing inserts. Do not place under other instruments or mishandle. Damage to the stack can result - deformed, warped or bent stacks can compromise the function of the insert.

Rinsing: Thoroughly rinse with tap water and dry completely prior to sterilization. Do not use chemical or surface disinfectants. Do not use phenols.

Sterilization: Sterilize using steam autoclave or chemical vapor sterilizer. Follow sterilizer manufacturer's instructions. Sterilize inserts in an instrument cassette or paper pouch in a steam autoclave. Do not sterilize in 100% plastic sterilization pouches. (A combination paper/plastic pouch is acceptable, paper side down.) Steam sterilize for at least 4 minutes at 270°F/132°C or

30 minutes at 250°F/121°C. Do not expose inserts to temperatures above 275°F/135°C or chemical vapor concentrations exceeding manufacturer's recommendations. Do not use Rapid Heat Transfer (Dry Heat) sterilization method.

Do not use cold disinfectant/cold sterilization solutions.

Optimum Performance

- Insert stacks should be straight and parallel at all times. Bent or warped inserts should be discarded.
- Bent and/or worn tips prevent effective operation of the ultrasonic insert and are subject to breakage. Inserts should be replaced when tip-wear reduces size and shape from original condition.
- Water lines to scaler should be flushed and hand-piece should be filled with water prior to use for most efficient results.
- The O-ring should be carefully maintained to ensure the longest possible life. Maintenance includes water lubrication of O-ring as well as proper seating of insert within the hand-piece.
- Damaged or broken (torn) O-rings should be replaced prior to use.

- Inserts are not indicated for use in restorative dentistry applications.

Proper Placement of Replacement O-Rings

Proper placement of O-rings will significantly extend the life of the O-rings and provide better ultrasonic scaling.

During installation, the O-ring should be protected from the sharp edges of the insert stack. For 25K inserts, this is the 3/16" x 3/16" x 3.75" dark section of the insert. For 30K inserts, this is the 3/16" x 3/16" x 3.0" dark section of the insert.

- Remove and discard old O-ring.
- Place new O-ring onto a straight drinking straw (1/4" diameter), approximately 1" from the end.
- Slide the straw completely around insert stack, starting with the side of the straw that holds the O-ring.
- Slide O-ring off of the straw and place into appropriate groove. Remove and discard straw.
- Sterilize insert before use.

Make sure you are using the supplied O-rings on your ultrasonic inserts, as other O-rings may not be the appropriate size.

1st # - Centigrade Scale
2nd # - Standard Scale

Black's Formula

A standard method used to describe the size, shape and angulation of cavity preparation instruments, created by Dr. Greene Vardiman Black ("the father of modern dentistry").

Hatchets, chisels and cavity prep instruments have 3 measurements: (x, y, z), based on a circular 100° (centigrade) scale, instead of the typical 360° (astronomical) scale.

x= the width of the blade in tenths of millimeters.

y= the length of the blade in whole millimeters.

z = the angle the blade forms with the long axis of the handle.

A fourth number, used on select angle formers and margin trimmers, is placed between the first two numbers (x, a, y, z).

a= the degree of angle for the cutting edge to the long axis of the handle.

Bredall - Smooth

Bredall Pluggers/Condensers have a unique rest.

Condensation pressure is directed to gingival and occlusal areas - not angulated towards the matrix bands. This is especially important when the operator is seated, because the dentist does not have to contort with the instruments to get packing thrust.

Additionally, the patient does not have to open as wide. The angulation does not have to be exaggerated to pack correctly. The finger rest aids in giving better amalgam packing forces.

Slix™ Composite Manipulation Instruments

Nonstick - Durable - Ergonomic - Autoclavable

The tips are treated with a revolutionary protective coating that provides superior non-stick properties and a lustrous surface for long lasting esthetic appearance. No more composite sticking; dentists appreciate the easy placement and fast clean-up! The ergonomic handles are manufactured from an advance technology polymer with medical-grade silicone grips. "Surprisingly light"-only 16g - on the largest available handle (1/2" (1.27 cm) diameter) to reduce hand fatigue.

Composite Instruments | Kompositinstrumente | Instrumentos para composite | | Instruments pour composites |

CCI and CMI Anodized aluminum on CMI and CCI instruments provides even greater lubricity to virtually eliminate composite sticking. The black coating does not abrade to discolor the restoration.

Composite Contact (CCI)

CCI technique

After placing composite into box, insert instrument tip into the composite, torque into position and apply gentle pressure to adjacent tooth for desired positive contact. Light-cure composite, making sure composite is not overfilled to lock in instrument. As recommended by Dr. Brian Wilk.

CMI technique

Acorn Carver (21B) is helpful in establishing anatomical contours, prior to carving.

Composite Manipulation (CMI)*

Cleaning/Sterilizing Tips

- Do not mix unlike metals in the same bag.
- Simply wipe off CMIs - do not expose to solutions with pH above 8 or containing iodophors.

78S, 79S and 80S Extra-Fine Apical Root Tip Picks/Elevators

These extra-slender tips can gently slide between the residual tip and the alveolar socket wall. With a back-and-forth motion, the tips are worked into position; a careful lateral movement then will engage the tip. With an occlusal-ward action, the root tip can often be released from its apical position in the socket. The set of three Root Tip Picks provides angulations to enable the dentist to reach all areas of the mouth.

| Cassettes et soin des instruments |

Instrument Cassettes

Premier stainless-steel instrument cassettes offer proven reliability and quality performance with an unparalleled satisfaction guarantee.

Unique, hingeless design offers years of trouble-free operation. Compact, double-stack feature accommodates more instruments for greater efficiency in ultrasonic cleaning, autoclaving and storing. Apertures in side walls, lid and bottom of trays permit optimum flow of cleaning solution, ultrasonic energy and greater access for rinsing.

Includes a five-year satisfaction guarantee.

9010904	Mark I (4 or 8 Instruments) 2.5" x 8.5" x 1.5"
9010908	Mark VI (8 or 16 Instruments) 4.5" x 8.0" x 1.25"
9010924	Mark IV (12 or 24 Instruments) 8.0" x 11" x 1.50"
9010901	Accessory Cassette 1.5" x 3.5" x 1.0"

"Best Products of the Year"
Mark VI Cassette

Premier cassettes are easy to use!

- 1 Rinse cassette/bur block organizer under running water.
- 2 Place cassette/bur block organizer in ultrasonic unit; use Brite Shield™ to remove bio-burden and to clean & protect instruments.
- 3 Rinse cassette/bur block organizer under running water.
- 4 Allow instruments & cassette/bur block organizer to dry thoroughly.
- 5 Wrap cassettes and sterilize.

Mark I (4 or 8 Instruments)
Ideal for prophylaxis or exam setups

Mark VI (8 or 16 Instruments)
Works for most operative procedures

Mark IV (12 or 24 Instruments)
Accessory compartment for loose items

Accessory Cassette
Holds either handpiece head or bur block

* An independent non-profit dental education and product testing foundation, November - December 2007.

Cassettes and Instrument Care

| Pflege der Kassetten & Instrumente | Cassettes y mantenimiento de instrumentos |
| Cassettes et soin des instruments |

Sterilization Troubleshooting

- **Don't sterilize dirty instruments.** They should always be cleaned before sterilization. Otherwise, the soil and dirt will become even harder to remove because the heat, hot water, or steam bakes the contaminant onto the instrument.
- **Don't use abrasives.** Steel wool or abrasive powders/soaps should not be used to scrub stainless-steel instruments. These abrasives may wear off the protective coating of the instruments. The finish protects the instrument from oxidation and corrosion.
- **Don't mix unlike metals.** Sterilizing different metals together can lead to a chemical reaction which can be detrimental to the instruments.
- **Don't use harsh detergents.** The pH of the detergent should be neutral (7pH). Highly alkaline (high pH) detergents may produce orange-brown stains. Highly acidic (low pH) detergents will cause black pitting marks that will permanently corrode and ruin the instrument.
- **Don't use chrome-plated instruments if the plating is starting to wear away.** Rust and corrosion will readily occur, spreading to other instruments.
- **Don't put instruments in a sterilizing unit that has a build-up of deposits in the sterilizing chamber.** Always remove scale and mineral deposits before sterilization. A mild abrasive or weak solution of acetic acid (vinegar) may be used to remove these deposits.
- **Don't use water with a high mineral content or water that is too soft.** Always use distilled water.
- **Don't exceed recommended temperatures.** Excessive heat in the sterilizing and drying procedures can be harmful to the metallurgy of the instruments and cause "rainbow-colored" stains.
- **Don't use vibrating marking devices to mark instruments.** Avoid the use of an "etching" device to personalize instruments. This can lead to rust/corrosion which can spread to other instruments.
- **Don't open the autoclave too soon.** The premature opening of the autoclave causes rapid condensation of steam on the hot instruments and will permit residue deposits.

Sterilization vs. Disinfection

Sterilization is the act or process of complete destruction of all living microorganisms, while disinfection is the act or process of destroying most disease-causing microorganisms. The two are not interchangeable! Both the Center for Disease Control (CDC) and the American Dental Association (ADA) warn that all patients should be considered potentially infected and recommend that complete sterilization procedures are used whenever possible.

Method	Conditions	Advantages
Steam Autoclave - Designed for stainless steel, textiles, liquids, heat-resistant handpieces, tubing & plastics.	20 minutes at 250°F (121°C) (15 psi) 3-5 minutes at 273°F (134°C) (30 psi)	Time efficient, good penetration, water-based liquid
Liquid Sterilants - Designed for heat-sensitive materials.	Up to 24 hours, using EPA registered solutions	Works on heat-sensitive items
Dry Heat - Designed for stainless steel, some heat-resistant handpieces, tubings and plastics.	2 hours at 320°F (160°C) 1 hour at 340°F (171°C)	No corrosion, can use closed containers, large capacity, immediately dry
Unsaturated Chemical Vapors - Designed for high carbon metal and stainless steel, textiles, liquids, heat-resistant handpieces, tubings and plastics.	30 minutes at 270°F (132°C) (20-40 psi)	Time efficient, no corrosion, items dry quickly

Steps for Proper Sterilization via Autoclaving

1. Pre-soaking & cleaning
2. Corrosion control and lubrication for hinged instruments
3. Packaging
4. Sterilization
5. Sterilization monitoring
6. Drying and cooling
7. Storage

premierdentalco.com/promise

We'll go the extra mile, every time.

We promise to:

- ✓ Make it easy to do business with us
- ✓ Provide innovative, standard-setting solutions
- ✓ Be your Product Concierge – for knowledge and service
- ✓ Make it right if we fall short
